The profile of linear drainage

Schlüter®-KERDI-LINE-VARIO

The next generation of linear drainage: Schlüter-KERDI-LINE-VARIO combines the efficiency of KERDI drainage technology with elegant profiles in Schlüter

designs. Why Vario? Drainage profiles can be individually cut to size at the construction site to create a precise fit for on-site conditions. And, the

connector of the drainage unit, which is rotatable by 360 degrees, enables optimum installation flexibility.

VARIO drainage profiles: Less is more

Many classic designs owe their success to the concept of “Less is more”. The true strength of these products is their focus on function, without ornamental accessories. From that perspective, Schlüter-KERDI-LINE-VARIO is already destined to become

a classic. The profiles only have a single purpose – to channel the water where it belongs. In spite of this simplicity, the system offers a number of choices: COVE and WAVE design options, the materials stainless steel and aluminium and in the latter,

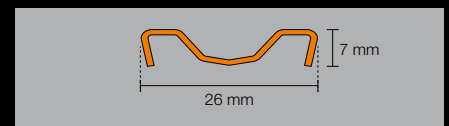

9 different TRENDLINE finish options. With these, you can either create a precise colour match for the drainage or an intentional contrast. The result is always a stylish floor-level shower.

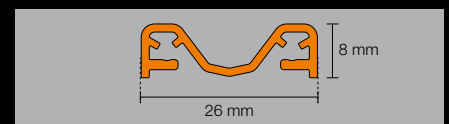

Schlüter®-KERDI-LINE-VARIO COVE

Schlüter-KERDI-LINE-VARIO COVE is a cove-shaped drainage profile, which can be cut to size, for use with the Schlüter-KERDI-LINE-VARIO-H drain. An intermediate opening allows water to flow into the drain. The drainage profile is supplied with 2 matching end caps. The installation height can be adjusted to the thickness of the floor covering by use of tile adhesive. This profile can withstand wheelchair use in a shower.

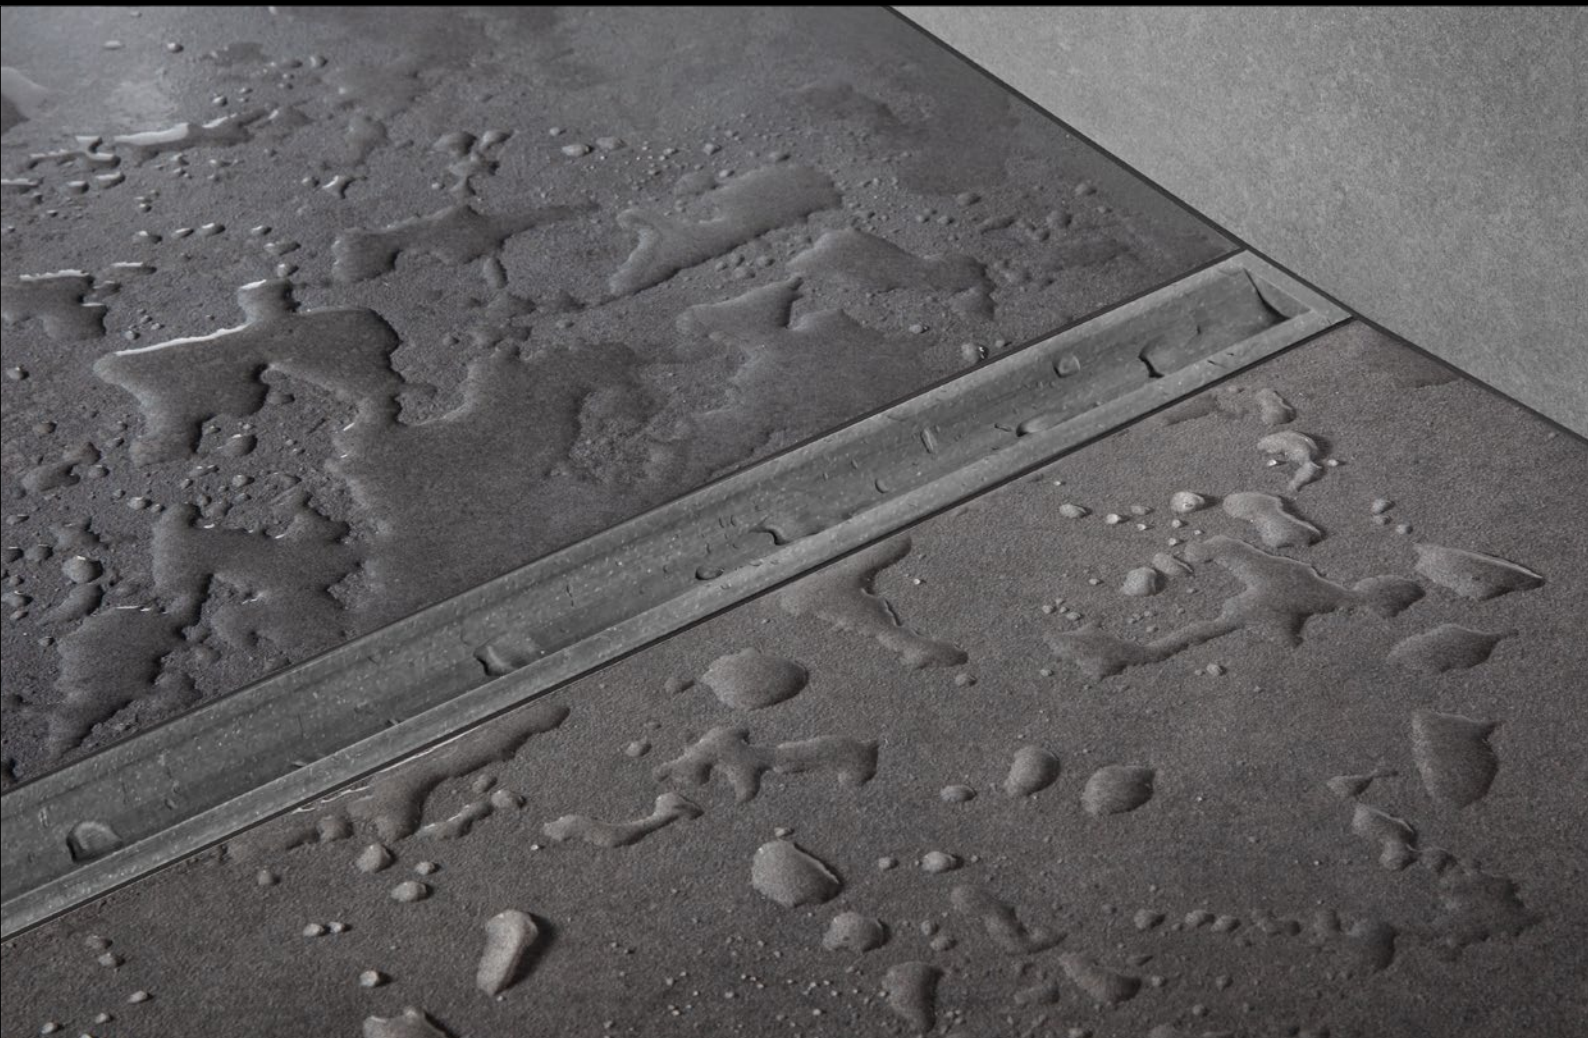

- ✓ Unobtrusive, slim drainage profiles
- ✓ Harmonious fit for tile patterns
- ✓ Individual sizing option (22 – 180 cm) and height-adjustable
- ✓ Narrow visible area of 26 mm
- ✓ Premium materials: brushed stainless steel and TRENDLINE powder coated aluminium
- ✓ Timeless elegant design
- ✓ Simple to install

Schlüter®-KERDI-LINE-VARIO WAVE

Schlüter-KERDI-LINE-VARIO WAVE is a W shaped drainage profile, which can be cut to size, for use with the linear drain Schlüter-KERDI-LINE-VARIO-H. An opening, which is elegantly concealed by a removable cover panel, allows water to flow into the drain. The drainage profile is supplied with 2 matching end caps. The installation height can be adjusted to the thickness of the floor covering by use of tile adhesive. This profile is not suitable for use with a wheelchair.

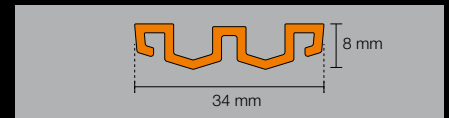

- ✓ Unobtrusive, slim drainage profiles
- ✓ Drainage profiles, individually adjustable in size (22 – 180 cm) and height-adjustable
- ✓ 2 variants: visual surface of 34 mm or 42 mm
Visual surface with broader opening suitable for attaching a hair trap
- ✓ Premium materials: brushed stainless steel and TRENDLINE powder coated aluminium
- ✓ Timeless design
- ✓ Simple to install

Always the perfect match: TRENDLINE textured coating

Our Schlüter-TRENDLINE colour series is sure to include the perfect profile to match current colour styles. You can choose from 9 high quality textured coatings in delicate colour gradations. Of course, you can always resort to time-honoured classics as well: both drainage profiles are also available in brushed stainless steel V4A.

WAVE design

An ultra-slim power package: KERDI-LINE-VARIO-H

Schlüter-KERDI-LINE-VARIO-H is a complete linear drain for floor-level showers where the fall is made using screed. It comprises a wave shaped drain body with horizontal outlet that can be rotated by 360 degrees, an integrated odour trap and an integrated elasticated KERDI-FLEX waterproof-

ing collar. KERDI-LINE-VARIO-H can be installed in an intermediate position, but is especially suited for installation against a wall. The wave-shaped design of the drain body and its smooth inside surfaces cause a high flow rate within the floor drain, which results in a self cleaning effect

that substantially reduces the cleaning frequency. Together with the Schlüter-KERDI-LINE-VARIO drainage profiles, the drain can be used to create an unobtrusive drainage solution in tiled floors.

Making good things even better: VARIO drain technology

Schlüter-Systems is well known for its slim drainage solutions. We now have further optimised our proven technology by combining our efficient wave shaped drain with

a new adapter with an integrated elasticated waterproofing collar that is a perfect fit for our drainage profiles. KERDI-LINE has achieved a new dimension of flexibility.

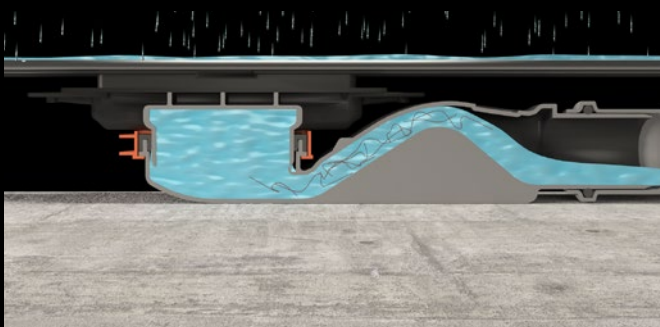

- ✓ Ultra-slim drain body
- ✓ Wave shaped drain, rotatable by 360°
- ✓ Built-in odour trap
- ✓ High flow rate in the floor drain
- ✓ Self-cleaning effect
- ✓ Drain adapter with integrated KERDI-FLEX collar
- ✓ Simple seal check with opening in protective lid
- ✓ Drain capacity and water trap height comply with DIN 1253 (KERDI-LINE-VARIO-H 50)
- ✓ Sound insulation element
- ✓ Multi-function protective lid:
 - Protects KERDI-FLEX collar
 - Screed levelling aid
 - Centre markings
 - Water inspection nozzle
 - Spacer for wall installation

Low installation height

High flow rate causes self-cleaning effect

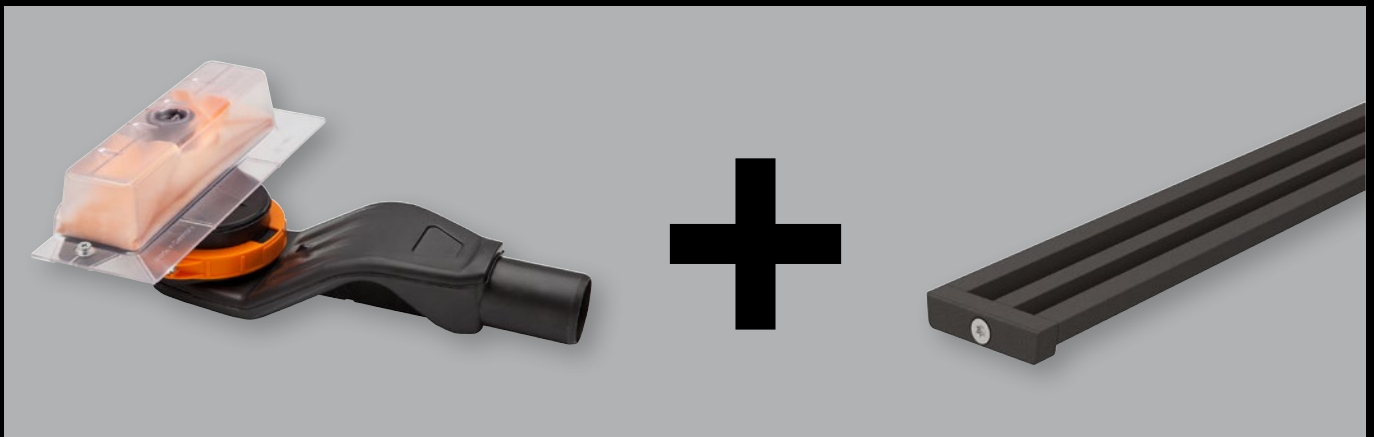

Wave shape creates permanent odour seal

Linear drainage in a versatile new concept

Linear drainage can be that easy: with KERDI-LINE-VARIO. You only need a drainage profile and a drain instead of rigid channel structures, frames and grates. They are a coordinated combination that always fits. The profiles can be individually cut to size to match the dimensions on site. 22 cm or 180 cm: a profile for all applications.

Standard compliant drainage

The KERDI-LINE-VARIO-H 50 drain ensures that the drain capacity and water trap height of the linear drainage meet the requirements of DIN 1253. In addition, all drain sets come with an elasticated KERDI-FLEX waterproofing

collar to connect to waterproofing assemblies as specified by DIN 18534. That makes KERDI-LINE-VARIO a suitable choice for public buildings and other structures where standard-compliant installation is mandatory.

Accessories

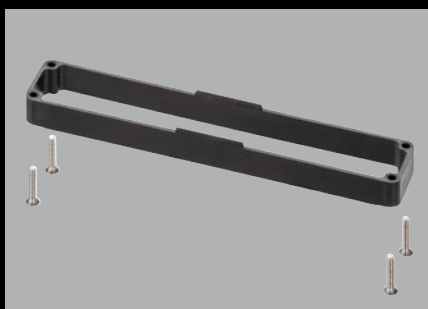

The right accessories for every installation situation: the frame extension sets KL VR DSE enable the use of COVE and WAVE drainage profiles with coverings that are 10 mm thicker. Please refer to the KERDI-LINE-VARIO product data sheet for more detailed information about covering thickness-

es and combination options.

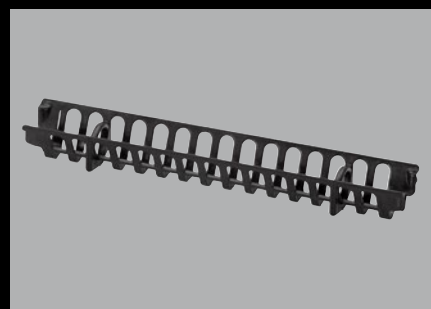

A matching hair trap is available for the WAVE 42 profile, which in addition to its primary function also reliably prevents small parts such as jewellery from being flushed down the drain.
