

Schlüter®-PROFILES

Find the perfect style & finish

Complement or accent any tile & stone design

Schlüter®-PROFILES

Profiles provide the finishing touch for your tile or stone installation, covering exposed edges and smoothing transitions between surfaces. This is where it all began for Schlüter-Systems, when in 1975, founder Werner Schlüter created the original edge protection profile, Schlüter®-SCHIENE.

Today, we offer a palette of designs, textures and materials with hundreds of possible combinations, enabling you to achieve the perfect balance of aesthetics and practicality.

Finish spotlight

Chrome Plated Brass (MC)

This finish is designed to provide the best match to the most popular brassware; it combines the hard wearing qualities of brass with the high end appearance of chrome plating. The result is a profile that is extremely high quality in every regard.

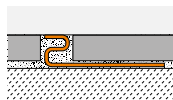

Edge protection & transition profiles for floors

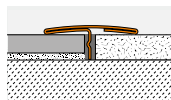

Tiled floors are easy to maintain but do require adequate protection to ensure they last for the lifetime of the installation. Our Schlüter-SCHIENE floor profiles (sometimes called trims) are designed to prevent tile edges from chipping and cracking. They also ensure a smooth, attractive transition without any trip hazards between floor coverings of the same height. If the adjoining floor coverings are of different heights, then take a look at the Schlüter-RENO series.

Finishing & edge protection for walls & countertops

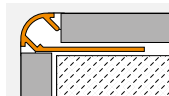

When it comes to tiling a wall, it's not just the tile itself that needs serious consideration. Equally important is the tile profile, which covers the edge of an exposed tile. This may seem like an afterthought, but the trim will allow you to finish the tiling in style and protect it for the long-term.

Stair nosing profiles

Stair edges are exposed to heavy mechanical loads and pose a high risk of tripping hazards. With our high-quality Schlüter TREP profiles, you can protect tile edges on stairs and reduce the risk of accidents at the same time.
